York St John University Biomedical Teaching Lab Case Study

The Challenge

The Biomedical Science laboratories at York St John University were built in 2014 and completed in 2016. The laboratory space had previously been teaching rooms, so needed to have all equipment bought in to furnish all laboratory space for both teaching and research activity.

Having previously worked with Bill Toon (Senior Sales Manager) they discussed the equipment and consumable needs with him to fully equip the laboratories with high specification equipment.

Our Approach

We have provided York St John with a wide range of laboratory equipment since we started working with them, including:

- Spectrophotometers
- Centrifuges
- Refrigerators and freezers
- Stirrer hotplates
- Pipettors, pipette stands, pipettes and tips
- Flasks
- Vortex mixers
- Test tubes and racks
- And many more!

We have also provided a 1-year service contract, to ensure all equipment is always in working order. At SLS, we pride ourselves on being a 'one-stop-shop' for laboratory equipment. Come to us, and you can find everything you need to equip your laboratory to the highest standard. We work closely with leading brands to ensure our customers have access to an extensive range of equipment, chemicals and consumables.

This approach made us the ideal supplier of choice for York St John University, and many of our other customers.

The Results

Dr Sue Jones, Director of Biomedical Science at York St John University had this to say about working with SLS:

"Working with one major supplier made it much easier for us to co-ordinate orders and to ensure that we purchased some items in bulk, thus maximising any discounts and streamlining our ordering processes.

I have always found working with SLS to be a pleasant and efficient process. Bill Toon the Senior Territory Sales Manager at Scientific Laboratory Supplies Ltd is helpful, knowledgeable and has years of experience, making him the ideal person to advise on equipment and product needs"
